

Roll positioning to center and straightening.

Turning of roll to Rolleri.

# Rolleri

**New possibilities for roll handling  
Independent of material, mass and size**

For Rolleri is typical:

- Small space demand
- With same unit is possible to handle **different sizes** of cylindrical pieces;
  - Diameters from 300 mm to 2500 mm
  - Weight from 500 kg to 20 000 kg. Structure varies depending of load.
- The operation is proved to be safe for workers and rolls; positive feedback from authorities has been received.
- Suitable for various materials:  
Plastic-, board-, paper-, steel rolls and cable reels

## Roll discharge from transfer car to floor

The kinetic energy caused by mass and inertia of the roll has been reduced to a minimum. Therefore the roll handling is flexible and does not damage the material.

## The applications of Rolleri are various

Lifting table application.

Vertical conveyor.

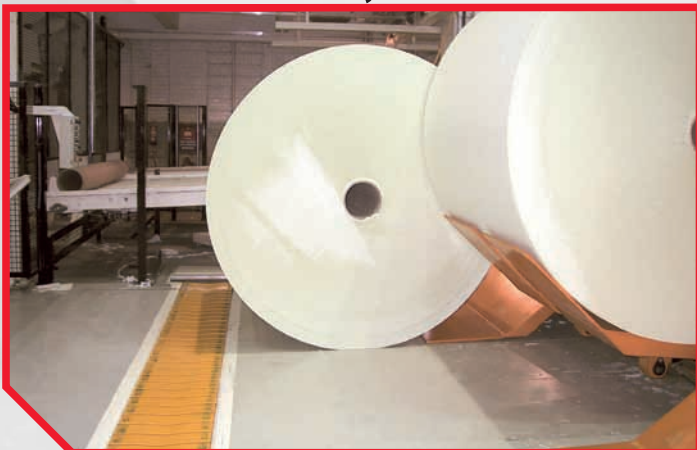

An alternative for lifting table.

## Roll separation

## Transfer to slat conveyor

## Applications:

- Lifting tables
- Turntables
- Transfer cars
- Elevators
- Crossing stations
- Belt conveyors...
